WEEKLY PROGRESS REPORT -03

DASHBOARD FRONTEND, LOGIN & SIGNUP PAGES (NO DATABASE CONNECTED)

Project: MuktoKormo (Freelance Marketplace)	Scope: Frontend UI/UX & Client Logic	Sprint: Week 3 (Interface Foundation)
Frontend: Next.js 15, React 19, Tailwind	Database: Not Connected (Mock State)	Next Phase: Database & Backend Wiring
Team Members	**Ahad Al Akid (2207018)**	**Ashraful Hosen (2207042)**

1. Project Overview & Current Architectural Scope

Executive Context: MuktoKormo is an Upwork/Fiverr-grade freelance marketplace designed for the Bangladeshi digital ecosystem. During this sprint, the complete frontend presentation layer, client-side state management, and interactive user experience were implemented from scratch.

Current Architectural Status (Frontend-Only): All completed pages (Dashboard, Login, and Signup) operate purely on the client side using React 19 state hooks (useState, useMemo) and structured mock datasets. No backend database is connected at this stage. Form submissions, fee calculations, OTP timeouts, role transitions, and budget filters simulate real platform behavior seamlessly, establishing a battle-tested UI/UX foundation prior to database linkage.

2. Work Completion — Initial Dashboard Frontend Architecture

A. Upwork-Grade Hero Stage: Dynamic role switcher ('I want to hire' vs 'I want to work'), keyword search bar, popular skill discovery pills, live escrow status card (BDT 45,000 Milestone Locked via bKash), and verified PRO talent preview.

B. Interactive Category Grid: 6 localized technical domains (Web & App, UI/UX, Digital Marketing, Video Editing, Bengali Content, Virtual Assistance) dynamically filtering the job feed on the client side.

C. Searchable Job Feed with BDT Budget Tiers: Real-time search and budget filters (< 15k, 15k-40k, 40k+), client credibility tags (Payment Verified, Phone Verified, Dhaka/BD location).

D. Proposal Drawer & 7% Fee Calculator: Freelancers submit bids with an automated fee deduction engine calculating net BDT payouts to MFS wallets in real time.

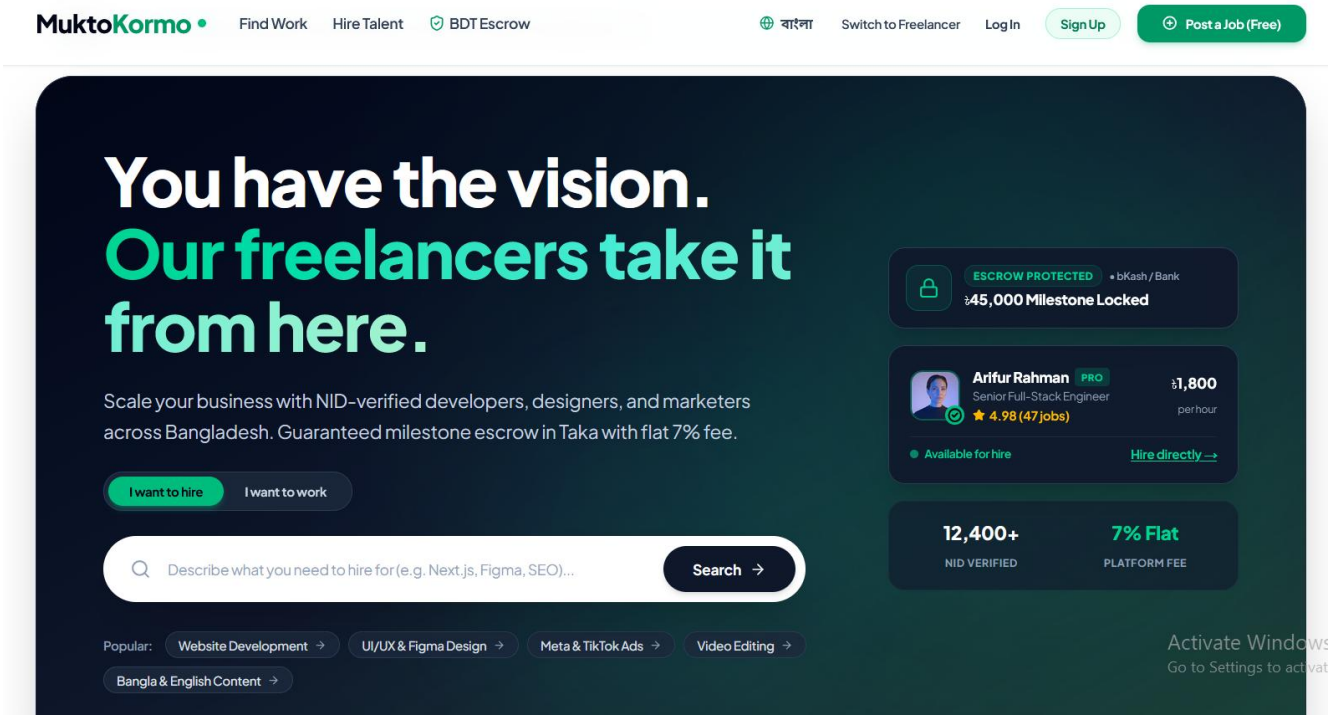

E. Escrow Simulator: 3-step milestone funding lock via bKash/Nagad/Rocket with PIN confirmation UI.

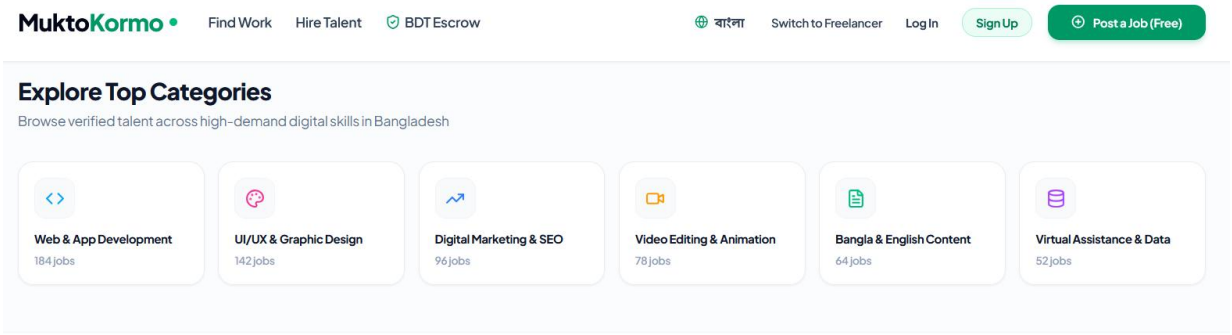

3. Work Completion — Dual-Role Login & Signup Pages Frontend

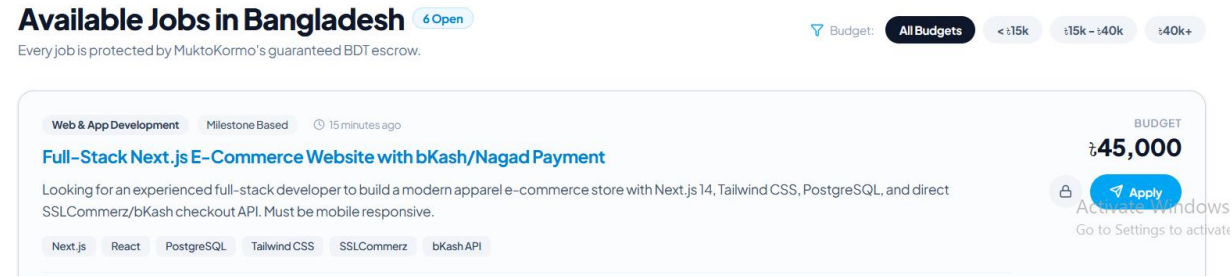

- **Dual-Role Login Page Frontend (/login):** Seamless client-side switcher between Client (Employer) and Freelancer workspaces, Google OAuth button, and email/password form with visibility toggle.
- **Bangladeshi SMS OTP Authentication (+880):** Phone number sign-in UI pre-filled with +880 country code, 6-digit OTP verification simulation, and 60-second cooldown timer.
- **Step-by-Step Onboarding Wizard Frontend (/signup):** Step 1 visual role determination cards ('I'm a Client' vs 'I'm a Freelancer'), followed by Step 2 form featuring Bangladesh District selector (Dhaka, Chittagong, Sylhet, etc.), hourly rate in BDT, dynamic skill tagging pills, and terms acceptance.
- **Architecture & Mock Data State:** All input states, form validations, role transitions, and simulated submissions are managed cleanly via React state hooks without requiring backend calls.

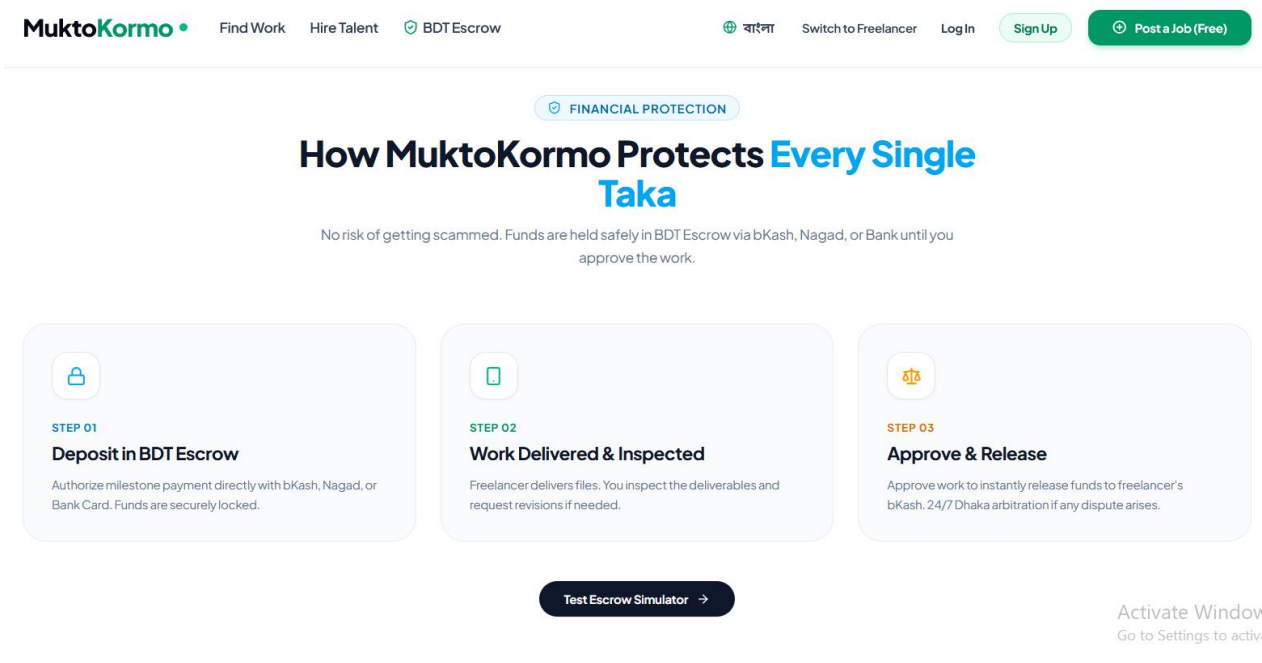

4. Work In Progress (WIP) & Database Integration Plan

- **WIP-1: Database Connection & Migrations:** Connect PostgreSQL database instance and apply the Prisma schema (User, Profile, Job, Proposal, Contract, Milestone, Transaction, Review).
- **WIP-2: Server-Side Authentication Engine:** Replace client-side mock auth with persistent session management (NextAuth.js / JWT), password hashing, and active BD SMS OTP gateway.
- **WIP-3: Job Posting & Bidding Persistence:** Connect Post-a-Job modal and Proposal drawer to backend REST/Server Action endpoints to store active client listings and bids.
- **WIP-4: Live MFS Escrow Gateway:** Transition frontend escrow simulator into live bKash/Nagad merchant sandbox APIs with IPN callback webhooks.
